BUILT IN CISTERN MODEL T05-2113

Self-Supporting Dual Flush Concealed Cistern For Wall Hung WC

The new built-in cisterns are fully insulated with expanded polystyrene. This insulation helps the built-in cistern to achieve excellent impact resistance and double noise reduction. The volume of water is 6lt max. The tank is made in USA from FLUIDMASTER with a bronze double flush valve. The wash volumes can be set to 3lt or 6lt. The control panel is not included in the drawer kit. All models are supplied with a 100/90 shunt which allows the drainage to be converted from O100 to O90 as well as adjustable basin support rods that are adjustable for a 18cm or 23cm gap. The metal frame is electrostatically painted with epoxy paint, while the height adjustment bases are galvanized. The maximum suspension load is 400Kg
